

Practice News from Non-Surgical Orthopaedics, P.C.

Non-Surgical Orthopaedics, P.C. is one of Atlanta's premier non-surgical orthopaedic practices and an industry leader for the non-invasive treatment of back pain, neck pain and other orthopaedic injuries.

SPINAL CORD STIMULATION FOR CHRONIC PAIN

Spinal cord stimulation (SCS) is a procedure that uses an electrical current to treat chronic pain. A small pulse generator, implanted in the back, sends electrical pulses to the spinal cord. These pulses interfere with the nerve impulses that make you feel pain.

Implanting the stimulator is typically done using a local anesthetic and a sedative. Your doctor usually will first insert a trial stimulator through the skin (percutaneously) to give the treatment a trial run. (A percutaneous stimulator tends to move from its original location, so it is considered temporary.) If the trial is successful, your doctor can implant a more permanent stimulator.

UNDERSTANDING PROLOTHERAPY AND THE TREATMENT OF PAIN

Chronic pain is very common in the United States, affecting more than 100 million American men and women according to the American Academy of Pain Medicine. In many cases, chronic pain is directly caused by weak, damaged, or lax connective tissues. These tissues, including the tendons and ligaments, are responsible for stabilizing the joints and facilitating fluid movement. To promote the strengthening of these tissues-and therefore, the alleviation of painful symptoms-prolotherapy was developed.

Our Doctors are now performing Prolotherapy for acute & chronic pain.

Georgia Institute for Clinical Research, L.L.C

Our [Clinical Research Department](#) is participating in clinical trials for the following conditions:

- Osteoarthritis (hips and knees)
- Low back pain
- Rheumatoid Arthritis
- Acute and chronic pain of any type
- Opioid induced constipation (OIC)
- Diabetic neuropathy
- Muscle spasms

We currently have a variety of study opportunities available for patients and others interested in participating in clinical trials. Typical requirements for participation in these studies include the criteria outlined below:

- Males / Females, over the age of 18
- No diagnosis of cancer within the past 5 years
- No diagnosis of gout
- No history of seizure disorder or epilepsy
- No history of gastric bypass surgery
- Willingness to convert current pain relief regimen to an Investigational Product

All study-related care is provided including physical exams, lab
